Ørsted A/S (ORSTED.CO) - short relative-only report

Valuation date 2026-10-30 | price date 2026-10-30 | accessed 2026-11-02 | EUR/share unless stated (DKK 131.9 = EUR 17.65 at ECB 7.4735).

STATUS: PROVISIONAL / QA-C NOT PASSED. Source-qualified comparable conclusion BLOCKED. Figures below are reproducible diagnostics, not an unqualified valuation or investment recommendation.

Scope: ORSTED.CO only; standard / published_damodaran / web_minimum. Dated 2026-10-30 cache reused; Denmark/DKK coverage already present. Reduced input step substituted for Stage 1; DCF and Stage 4 skipped by approved relative_only deviation. Short PDF supplied by explicit user instruction.

1. Financial basis and definitions

FY2025 calendar year, DKKm. Revenue 73,244; vendor EBIT 12,495 / EBITDA 21,583 versus issuer EBIT 8,620 / reported EBITDA 22,448 (25,065 excluding new partnerships and cancellation fees); net income to common 1,727; parent common equity 119,718 after stripping DKK 20,955 hybrid capital; gross debt 107,857; cash 53,448; NCI 8,268; base EV 236,927; tax 47%; common payout 0%.

2. Comparable method

Ten Europe-listed peers selected at the first Europe step (Tier 1-2: 10; Tier 3: 0; Europe-listed: 10/10); no size/World relaxation. Primary EV/EBITDA median 13.01x, n=9; diagnostic range EUR 14.71-32.22, midpoint EUR 19.99 (+13.3% vs price). Cross-check midpoints: EV/EBIT EUR 18.77; PBV EUR 4.98.

3. Published regression method

Denmark resolves exact EUROPE equations from regressions_multi_2026-01. PBV is selected by highest published R2 (0.423): EUR 35.99/share; PE EUR 6.47; EV/EBITDA EUR 38.02. Analyst consensus growth inputs are g_eps 51.15% and g_rev 8.84%; payout is 0.0 on common basis. EV/EBITDA decimal-policy alternative is also recorded because the percentage-point policy gives a materially different multiple.

4. Limitations and QA

Ørsted had a large October 2025 rights issue, leaving a transitional cash/debt perimeter. Vendor and issuer EBIT/EBITDA definitions differ materially; hybrid capital is not common equity and is removed once in target EV inversions. The published equations are market-wide, low-R2, approximately ten months old, omit SEy/p-values, and use analyst-growth definitions. Human Spot_check and full source/ownership/event certification remain pending. QA block C was executed once and not passed; failures are recorded in qa_results.md, not waived.
